

Here are some photos and drawings to help you assemble our HO #5177 staircase. Hopefully, you can use these pieces to configure the stairs to fit your needs...whether making a straight staircase or one with multiple landings

This drawing is from our 2nd Class Saloon kit and shows how to trim the pieces so they fit together to make the staircase shown. Note that you will need to cut the railings...both the ones for the landing and the one for the hand rail. You also need to trim the stair risers (top and bottom) and notch the edge of the steps to accept the vertical rail posts.

Use Liquid styrene cement to connect the railing pieces.

This drawing shows a staircase with multiple landings.
